

BITURBO BAKING OVEN

MODEL: CG-P8 / CG-P8-SC

The CG-P8 is a convection style Oven which is designed specifically for use in limited space applications and operations open for clients viewing of the baking process. The BITURBO oven is a highly efficient baking oven. The recirculated air was engineered in such a way that all the products within the oven are baked evenly and delicate products such as meringues do not get pushed over to one side. The BITURBO features a fully illuminated, highly visible interior baking chamber equipped with steam injection that allows the precise amount of steam to be applied for optimal baking results. An optional proofing chamber on the CG-P8-SC is available for further convenience.

The oven has been designed with customer satisfaction and durability as the prime considerations. This is why we construct the interior baking chamber, and exterior in Stainless Steel. All electrical components were researched in order to ascertain which will provide optimal and lengthy service.

All BITURBO Ovens come standard with steam injection, an eight (8) pan baking capacity of 18" x 26" x 1" pans. They also come with an exhaust hood fan, a manually operated damper, baking timer, accessible and legible controls, and a High-Limit Temperature safety control.

The CG-P8-SC comes equipped with the same baking capacity plus an optional steam cabinet with the capacity for sixteen (16) pans of 18" x 26" x 1". Both Oven's interiors can be made to accommodate any size pan.

This oven is available in gas, propane and electric configurations.
