

ROTARY KNIFE DIVIDER

MODEL: CGU/8000C

The CGU/8000C Rotary Knife Divider was specifically developed to gently process high moisture content dough such as Ciabatta buns and breads.

The CGU/8000C is capable of producing up to 6000 pieces per hour. Built to withstand the rigors of the worlds markets, all dividers are built Heavy Duty and utilise top-line quality components to endure harsh environmental conditions.

Although the Divider is ruggedly built and is able to endure countless shifts with ease, it is however, able to cut and weigh high gluten content dough without breaking down inferior dough fibres. The extra gentle laminating capability and stress free portioning maintains cell structure and texture of long fermented dough. This advantage translates into a superior end product.

The versatility becomes evident with the possibility of changing the knives – a simple operation. Equipped with two knives, the operator has the choice of using a single cut blade for large portions such breads or longer buns, or the use of the dual cut blade exclusively for buns. The machine is mechanically variable in speed while the knives are electronically variable.

Comes equipped with all Stainless Steel Exterior, adjustable Stainless Steel Four Sifter and Two Teflon Coated anti adhesive knives.
